RE: Timberline Property – Tree Survey

Dear Mr. Margowski:

At the request of Western Care Construction Company Inc., ECORP Consulting, Inc. has conducted a tree survey for the Timberline Property located in Placer County, California. This survey included identifying 65 previously surveyed trees, located within the project site. These 65 trees had diameters at breast height (dbh) of greater than or equal to 24 inches for single trunk trees and 36 inches for multi-trunked trees.

The 65 trees were identified based on data provided from an arborist survey conducted in 2004 by Sierra Nevada Arborists. Identification of each individual tree was accomplished by observations of tag numbers from the 2004 survey, and by comparing dbh measurements taken in the field against dbh measurements taken during the 2004 survey.

For this survey, each of the 65 trees was marked with red flagging around the trunk. New aluminum rectangle tags, containing the tree number from the 2004 survey, were placed on the trunk of each tree missing the round tag from the 2004 survey. Additionally, GPS coordinates for each tree were recorded using a handheld Trimbel GPS unit (Attachment A). Tree locations were plotted on an aerial map of the project area (Figure 1. *Tree Locations*).

In conclusion, we surveyed 65 trees within the Timberline Property project site that were identified as having single trunk dbh's greater than or equal to 24 inches or multi-trunked dbh's greater than or equal to 36 inches. Each tree was marked using red flagging tape and GPS coordinates were recorded.
