Hi Laura,

I have attached a summary of the VMT calculations without alternative mode trips included.

I will be out of the office tomorrow, but if you have any urgent questions you can contact Katy in our office; otherwise I will be back on Monday.

Have a good weekend:-)

Subject: More Homewood Comments

Hi Marissa,

I have received another batch of comments on Homewood and additional direction for the GHG analysis. I need to quantify base traffic emissions (i.e. without the alternative trip reductions). Based on the data you have already supplied, I have the base trips (total external) and the base trip generation rates (daily rate) for each of the alternatives. However, I believe the VMT you supplied already applies the Alt. Mode reductions, correct? If so, can the base VMT for each land use and alternative be supplied? If there is a simple way to calculate this from the trips, I can always do that as well.

Thanks!
